

CORPORATE SERVICES

1. Introduction

Stackly is a professional business solutions company. This website delivers a complete online presence covering company identity, service offerings, blog content, careers, client contact, and secure role-based dashboards — all built with HTML5, CSS3, and vanilla JavaScript. The codebase follows a multi-page architecture sharing a global stylesheet (global.css) and a primary JavaScript file (main.js), with a separate login handler (login.js). No build tools or server-side runtime are required — the site deploys directly to any static host.

Theme Features

- Fully Responsive HTML5 — tested from 320px to 1536px+
- Navy, cream, and gold brand palette with CSS custom properties
- Shared global.css token system — restyle entire site from one file
- Scroll-progress bar (#scroll-bar) on all public pages
- Scroll-reveal animations via IntersectionObserver (.fade-up, .fade-in, .stagger-*)
- Sticky header with .scrolled glass-blur on scroll
- Animated counter stats (data-val / data-suffix)
- Horizontal ticker / marquee strip on homepage
- Mobile hamburger menu (checkbox toggle — no JS required)
- Admin Dashboard — KPIs, activity feed, task manager, revenue chart, project & client tables

- Staff Dashboard — personal KPIs, task list, schedule, performance, leave request, payslips
- Login page — Admin / Staff role tabs with demo credentials
- Services page — 6 service cards + 4-step process strip + CTA
- Blog page — featured post + 3-column grid with category filter buttons
- Careers page — culture section, perks grid, photo gallery, 5 open job listings
- Contact page — split form/info layout, budget pills, char counter, success state
- About page — story, stats strip, mission/vision/values cards, team grid
- 404 Error page — custom branded not-found screen with Go Back / Go Home
- Footer newsletter input on every public page
- SEO-friendly semantic HTML structure throughout

Technologies Used

Technology	Purpose / Description
HTML5	Semantic page structure and content markup across all pages
CSS3	Styling, animations, CSS custom properties, Grid, Flexbox, keyframes
JavaScript (ES6)	Scroll animations, counters, form validation, login routing, dashboard logic

Google Fonts	Playfair Display (headings), DM Sans (body), Cormorant Garamond (display), Outfit (UI)
Intersection Observer API	Scroll-reveal for .fade-up, .fade-in, .stagger-* elements — no library needed
CSS Grid & Flexbox	Primary layout system across all grids, dashboards, and component rows
CSS Keyframe Animations	Hero badge pulse, ticker scroll, floating card hover, spinner, shape float
Session Storage	Client-side auth state — stores logged-in role (admin or staff) after login
CSS Custom Properties	Design token system in global.css replacing all hard-coded values
Checkbox Hack	Pure-CSS hamburger mobile menu — no JavaScript toggle required

Folder Structure

All files are in a flat directory. No build step or package manager is needed.

File	Description
index.html	Homepage — hero, ticker, stats, services, why, process, testimonials, industries, pricing, FAQ, CTA
about.html	About Us — story, stats strip, mission/vision/values, services mini, team grid

services.html	Services — 6 service cards with feature lists + 4-step process strip
blog.html	Blog — featured post + 3-column article grid with category filters
careers.html	Careers — culture/perks, photo gallery, 5 open job listings
contact.html	Contact — split info/form, budget pills, char counter, map placeholder
login.html	Login — Admin/Staff tabs, role-based redirect, demo credentials
admin.html	Admin Dashboard — KPIs, activity, tasks, revenue chart, projects, clients
staff.html	Staff Dashboard — personal KPIs, tasks, schedule, performance, leave request
404page.html	Custom 404 — branded not-found page with Go Back / Go Home buttons
global.css	Shared design tokens, nav, footer, sections, buttons, utilities
main.js	Scroll-reveal, counter animations, scroll bar, header sticky logic
login.js	Login form validation, role switching, redirect to admin.html or staff.html

assets/	Images — logo, service photos, blog covers, team portraits, culture gallery
----------------	---

Page Overview

Homepage (index.html)

The homepage is the primary landing page. It opens with a full-viewport hero section containing an animated badge, a large headline ('Professional Business Solutions That Scale'), a description, two CTA buttons, floating metric cards, and a hero visual image. Below the hero, a horizontal ticker scrolls partner and service names. A four-column stat strip uses animated counters: 500+ Clients, 120+ Projects, 50+ Team Members, 20+ Years Experience. Six service cards follow in a grid (Business Consulting, Digital Marketing, Technology Solutions, Financial Advisory, HR Management, Legal Services). The 'Stackly Difference' section highlights five key reasons to choose the firm: Expert Team, Proven Results, 24/7 Support, Global Reach, and Custom Solutions. A four-step process section follows. Three testimonial cards in a navy background section show real client quotes. An industry verticals section, a pricing section (monthly/annual toggle), an FAQ accordion, and a CTA banner close the page.

About (about.html)

The about page opens with a page-header banner, then presents a two-column story grid with a company description on the left and a large image with a floating badge and caption on the right. A navy stats strip shows four counters: 500+ Clients, 15+ Years, 50+ Team Members, 20+ Countries.

Three mission/vision/values cards follow with accent-coloured top borders. A mini services highlight section provides quick links back to the services page. A four-card

team grid introduces leadership: Richard Caldwell, Priya Nair, Marcus Webb, and Elena Kowalski. A CTA section closes the page.

Services (services.html)

Six service cards are displayed in a three-column responsive grid. Each card contains a full-width cover image with a gradient overlay and an icon badge, a heading, a description paragraph, a three-item feature list, and an 'Enquire Now' link. Services covered: Business Consulting, Digital Marketing, Technology Solutions, Financial Advisory, HR Management, and Legal Services. A four-step process strip on a navy background follows — Discover, Strategize, Execute, Optimize — each with a large serif number. A CTA section at the bottom offers a free 30-minute consultation.

Blog (blog.html)

The blog page opens with a page header, then displays category filter buttons: All, Strategy, Technology, Finance, and Consulting. A featured post card spans two columns with a large image on the left and article metadata, heading, excerpt, and read-more button on the right. Below the featured post, six article cards appear in a three-column grid. Each card shows a thumbnail with a category badge, article metadata (date, read time), headline, excerpt, author avatar with name, and a Read More arrow link. Article categories cover Technology, Consulting, Finance, and Strategy.

Careers (careers.html)

The careers page opens with a page header, followed by a two-column culture section. The left column shows a tall image with an overlay and an embedded stats bar (open roles, team size, countries, satisfaction). The right column contains a section label, heading, two paragraphs about life at Stackly, and a 2×2 perks grid covering: Global Teams, Learning Budget, Award Winning culture, and Long

Partnerships. A five-item photo gallery in a bento-grid layout follows. Below the gallery, five open job listings are displayed as card rows with job title, type/location/category tags, and an Apply button: Senior Business Analyst, Full-Stack Software Engineer, Digital Marketing Manager, Financial Advisory Associate, and HR Business Partner.

Contact (contact.html)

The contact page opens with a split hero containing a left text column ('Let's Start a Conversation') and right floating info cards. The main contact section is a two-column layout. The left column shows company info items (address, phone, email, hours), social links, and a map placeholder. The right column contains the contact form. The form collects: First Name, Last Name, Email (with prefix icon), Service Interest (dropdown), Budget (pill-toggle selector with options such as Under \$10K through \$100K+), and Message (textarea with 500-character counter). A submit button shows a loading spinner and transitions to a success confirmation on completion. A social strip and CTA section close the page.

Login (login.html)

A two-panel layout. The left decorative panel shows the Stackly logo, a welcome headline, four feature bullet points (analytics, projects, collaboration, security), and a copyright footer. The right panel contains the sign-in form.

A role-tab strip toggles between Admin and Staff modes. Both require a username and password. Demo credentials shown on-page: admin / admin123 and staff / staff123. On successful Admin login the user is redirected to admin.html; on Staff login to staff.html. A password visibility toggle and 'Remember me' checkbox are provided. A 'Back to Website' link returns to index.html.

Admin Dashboard (admin.html)

The admin dashboard is the central management hub. A fixed left sidebar (260px) contains the Stackly logo, admin avatar with name and email, and seven navigation links: Dashboard (active), Manage Services, Manage Blogs (badge: 3), Clients, Manage Staff, Manage Careers, Settings, and Reports. The main content area opens with a personalised welcome banner ('Good Morning, Admin') and live date. Four KPI stat cards display: 120 Total Projects, 50 Staff Members, 500 Total Clients, and 15 Blog Posts. A two-column grid below contains a Live Activity Feed (auto-updating log entries) and a Task Manager (add/complete tasks with Enter key). A second grid row shows a Revenue (2026) bar chart, a Projects Table (Atlas Platform, Nexus Rebrand, GlobalEdge CRM, Apex Analytics with status badges), and a Client Overview panel. Slide-in panels for Settings and Reports are accessible from the sidebar.

Staff Dashboard (staff.html)

The staff dashboard serves individual team members. The sidebar navigation links cover: Dashboard, My Tasks (badge: 4), My Schedule, Performance, Projects, Team, Leave Request, Payslips, and Settings. The user's name and email are populated from sessionStorage. Four KPI cards show: 12 Tasks Assigned, 87% Completion Rate, 2 Meetings Today, and 14 Leave Days Left. A two-column grid below contains a task list and a daily schedule. A second grid row displays a performance panel, a Weekly Performance bar chart, and a Leave Request form with a success confirmation state. A third row shows a Projects table spanning two columns and a team contacts card.

404 Error (404page.html)

A standalone page with a black background and a subtle gold grid overlay. A centred container shows the Stackly label, a large '404' heading with a gold italic zero, a thin gold divider, 'Page Not Found' sub-heading, an explanation paragraph, and two

buttons: 'Go Back' (ghost style, uses `history.back()`) and 'Go Home' (gold primary, links to `index.html`). A copyright footer note closes the page.

JavaScript (main.js & login.js)

main.js — Shared across all public pages

Function / Logic	Description
Scroll progress bar	Updates <code>#scroll-bar</code> width as percentage of page scrolled
Sticky header	Toggles <code>.scrolled</code> class on <code><header></code> after 60px scroll
IntersectionObserver	Adds <code>.visible</code> to <code>.fade-up</code> and <code>.fade-in</code> elements on viewport entry
Counter animation	Animates <code>[data-val]</code> elements from 0 to target on scroll entry; supports <code>[data-suffix]</code>
Ticker duplication	Clones <code>#ticker</code> content to create seamless infinite scroll
FAQ accordion	Toggles active state on <code>.faq-item</code> click; closes others

Pricing toggle	Switches between monthly/annual pricing on toggle-switch click
Mobile menu	Checkbox-based — no JavaScript required; CSS handles open/close

login.js — Login page only

Function / Logic	Description
Role tab switching	Clicking Admin/Staff tabs updates active state and adjusts any role-specific UI
Password toggle	Clicking the eye icon toggles input type between password and text
Form validation	Checks username and password are non-empty; shows .error-msg with shake animation
Login routing	admin + admin123 → admin.html; staff + staff123 → staff.html; else error
Loading state	Adds .loading to button — hides label, shows CSS spinner for 0.8s before redirect
sessionStorage write	Stores { role, username } in sessionStorage before redirect

SEO & Performance

Current Implementation

- ✓ Semantic HTML5 elements throughout (header, nav, section, footer, article)
- ✓ Descriptive page titles on every file (e.g. 'Services — Stackly')

- ✓ Alt attributes on all images
- ✓ Logical heading hierarchy: H1 per page hero, H2 section titles, H3 sub-sections
- ✓ Schema-friendly structure for Local Business and service pages

Credits & Librarie

Resource	Usage
Playfair Display (Google Fonts)	Display and hero headings across public pages and dashboards
DM Sans (Google Fonts)	Body and UI typography on dashboards and login page
Cormorant Garamond (Google Fonts)	Large display numbers and logo text on public pages
Outfit (Google Fonts)	Form labels, filters, and UI elements on public pages
Unsplash / local assets	All photography — hero, service covers, blog thumbnails, team, culture gallery
IntersectionObserver API	Scroll-reveal animations — native browser API, no external library
CSS Custom Properties	Design token system — single-source-of-truth for all colours and spacing

Checkbox Hack (CSS)	Pure-CSS hamburger menu — no JavaScript required
sessionStorage API	Client-side authentication state storage between login and dashboard pages

Support & Troubleshooting

If you encounter any issues while editing or deploying the Stackly theme, follow these steps:

- Check all file paths - style.css and main.js must be in the same directory as the HTML files.
- Verify that your logo image file name exactly matches the src path referenced in the nav elements.
- Open the browser DevTools console (F12) and check for 404 errors on missing assets.
- Ensure all HTML files are saved with UTF-8 encoding to prevent character rendering issues.
- For authentication redirect issues, confirm the destination file names match exactly (case-sensitive on Linux servers): User-Dashboard.html and Admin Dashboard.html.
